

Two sided DISPLAY stand

DRIVE

self sustaining (1 x h. 2,1m)

A structure made of anodized aluminium and zinc steel base coated with anodized aluminium.

The panel is made of plexiglas and coated with satinized vinyl.

Several transparent methacrylate

A4 format pockets are displayed

on the panel and fixed onto it

by using brass spacers coloured

with a satinized silver or

a chromium plated coating.

Every pocket can be closed by using the provided foldaway small magnets.

The presence of the small magnets

avoids any inaccurate removal of

the paper though without complicating the substitution procedures.

Special dimensions and specific applications of the
